

Abstract

A system and method that facilitates e-commerce volume pricing is provided.

According to one aspect of the present invention, the system includes an offers and orders component that receives and aggregates orders for a product from a plurality of buyers.

5 The system also includes a logistics component that determines a shipping price for the product for a subset of the plurality of buyers. The shipping price is determined at least in part upon the subset of buyers sharing a shipping method. According to another aspect of the present invention, a method is provided in which buyers within an aggregated purchasing group may be subject to different pricing structures for the same product.
